

Advanced Power and Energy

PTI works to achieve results in the development of a major new technology, installation of a state-of-the-art system, reengineering of a current enterprise, or implementation of new processes and tools. PTI engineers provide leadership in the development of a program from vision to fruition.

Project Implementation

- Analysis and business case development
- R&D organization and preparation
- Marketing & sales strategy and planning
- Conceptual design development
- Engineering & procurement management
- Prototype and manufacturing oversight
- Acquisition and implementation

The Prospective Technology, Inc. (PTI) Team is constantly developing expertise and leveraging experience gained in state-of-the-art technologies and traditional equipment for the acquisition, management and development of strategic energy solutions.
